Project Title
Bike Sharing Analysis

Year Accomplished
2025

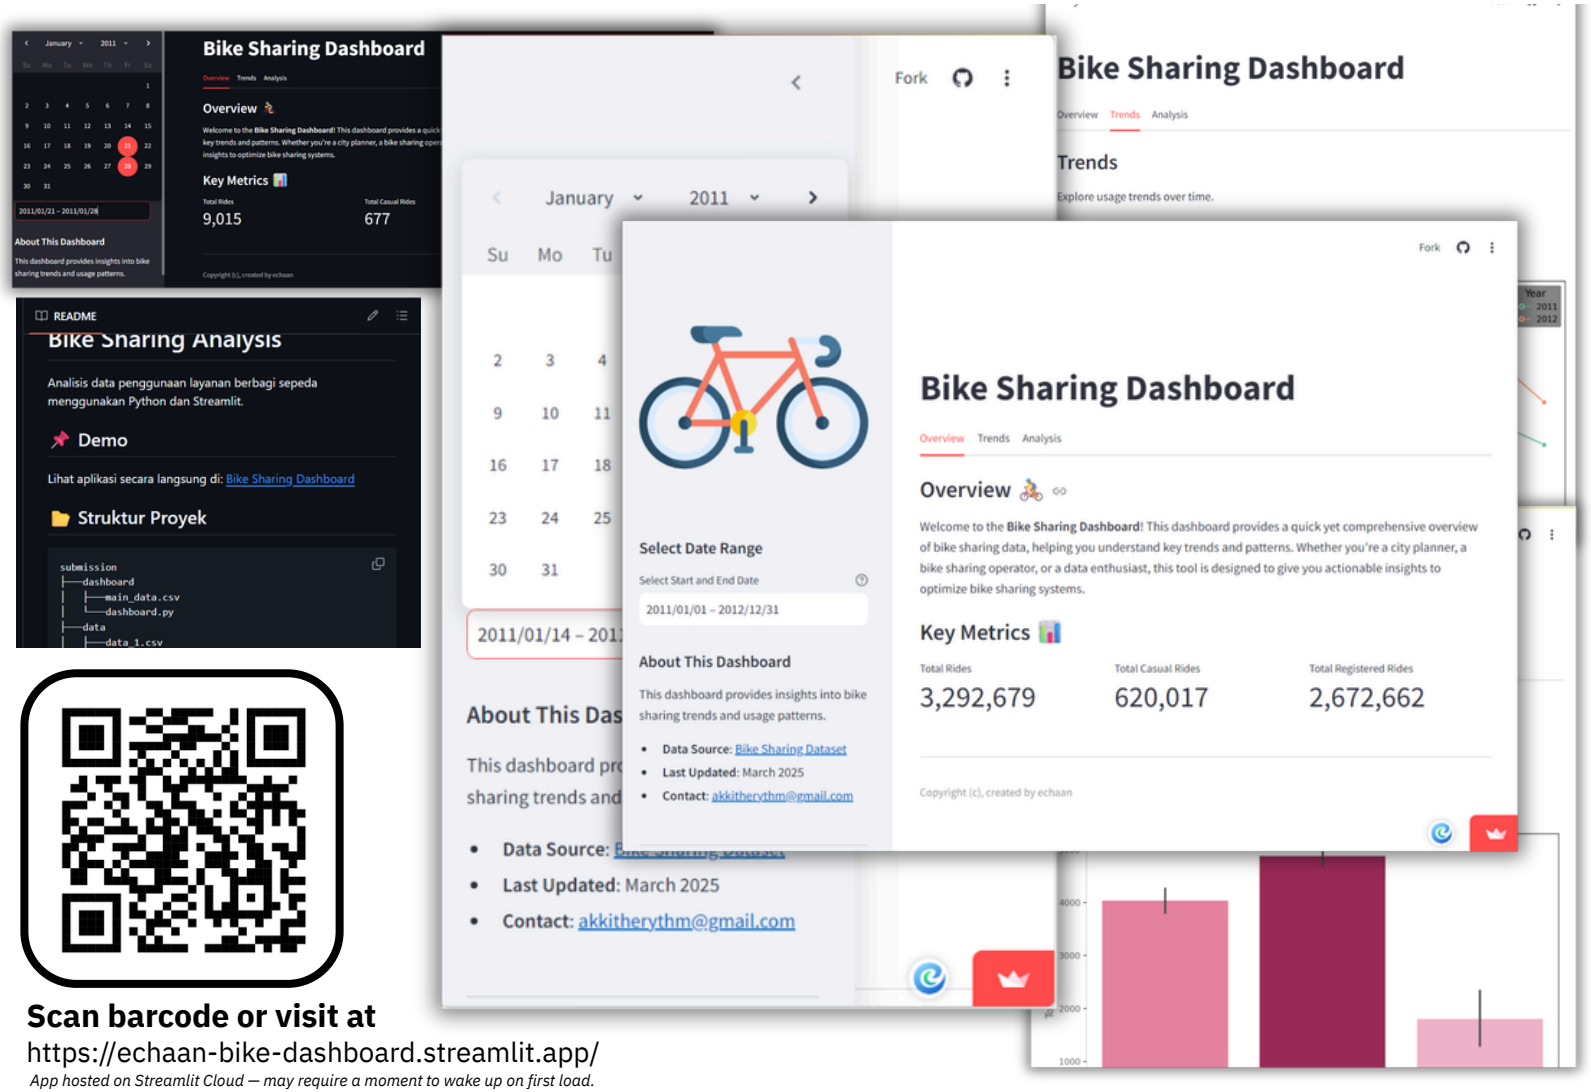

Role
Data Analyst (Individual Project)

Conducted an end-to-end data analysis workflow, including data wrangling, outlier handling, exploratory data analysis (EDA), and visualization, delivering actionable insights into rental patterns across weather conditions, seasons, and yearly trends through an interactive Streamlit dashboard.

What I Learned
This project taught me how to transform raw data into meaningful insights and communicate them effectively through data visualization and storytelling.

Project Description
Bike sharing services generate large volumes of usage data, but valuable insights into rental behavior are often overlooked. Using Python, I conducted an end-to-end analysis of a bike-sharing dataset, including data wrangling, outlier handling, exploratory data analysis (EDA), and interactive dashboard development with Streamlit. The analysis addressed key business questions related to yearly rental growth, the impact of weather conditions, and seasonal usage patterns, revealing that rental demand was highest during clear weather and the fall season.
